Meetings more
efficient, streamlined
and flexible than ever

Everything you need for on-site
and hybrid meetings, with voting
& interpretation

CONFERENCE

TELEVIC
HEADQUARTERS,
BELGIUM

Making your meetings more streamlined and flexible than ever

- + Physical, remote & hybrid meetings
- + Crisp, clear audio
- + User-friendly voting & interactivity
- + Interpretation solutions

Televic Conference has been a reference in **speech amplification and modular solutions** for council meetings for decades. Our internationally acclaimed technologies are used by international institutions with the most demanding requirements, such as the **NATO headquarters**, the **European Parliament** and the **World Health Organisation**. But our solutions are also available on a smaller scale, with hardware and software set-ups tailored to the specific needs of local city councils.

NEW

Smart Audio & Control

The audio control and quality of the future have arrived today.

Discover our
products
enhanced with
**SMART AUDIO
& CONTROL**

Televic's Smart Audio & Control presents a set of innovative audio developments. We introduced a new microphone mode and applied the latest processing and routing techniques to make your meetings crisper and more intelligible than ever before.

- + Optimized intelligibility for both in-room and remote participants
- + Consistent audio coverage in every kind of meeting room set-up
 - + Reduced acoustic feedback
 - + Hands-free discussion mode
- + The ability to use your current system with our DSP audio-routing type

Consistent audio coverage

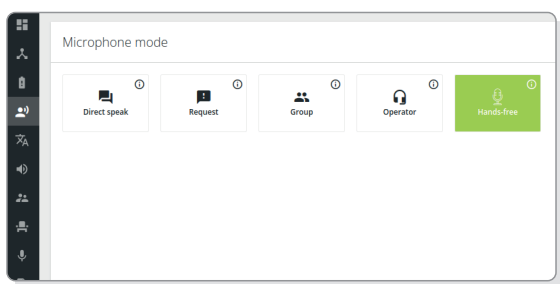

Crystal clear in-room and hybrid meetings

Don't worry about bringing in additional speaker systems. Thanks to our dynamic mix-minus, based on the open microphones, you can count on consistent audio coverage in the entire meeting room. Whether your participants are right next to you or overseas (through Teams or Zoom), they will be able to receive and convey messages in the same crystal-clear quality - even when your own microphone is active.

Hands-free microphone mode

Don't push it

Our new microphone mode allows you to use our conference system units without pushing any button at all. Since all microphones are open, you can join the discussion whenever you want, hands-free. Time to welcome the most convenient meetings ever.

Compatible with your existing audio system

Our DSP audio-routing type enables you to reuse your meeting room's existing DSP and audio systems. You can control every single part of the Televic audio system at all times.

Confero Audio configurator

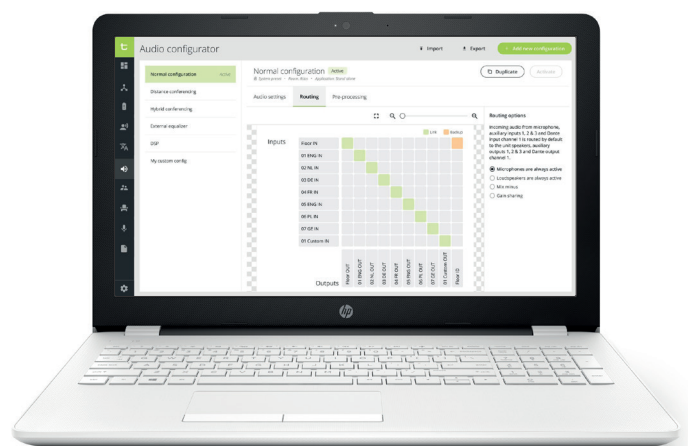

This tool makes it possible to configure the audio path and audio parameters of a Confero-based meeting room. You can efficiently group and route all audio inputs and outputs, and manage everything through a convenient matrix. Don't forget to enjoy its flexibility in signal routing reducing the dante channel count and processing power needed for echo cancellers, allowing you to economize on your DSP of choice.

Reduce acoustic feedback

By default, the auto-gainsharing feature is enabled on all our microphone modes. That means that the system monitors all the microphones at the same time. It amplifies the speaker's voice, subdues the listeners' microphones, and reduces background noise. Do you want to turn up the volume? No need to worry about echoes or feedback: every participant will hear your message clearly and accurately.

Look who's talking: speech detection

Guarantee vivid engagement without confusing your listeners. With the speech-detection feature, you will always know exactly who is speaking. Even in a discussion between multiple people, you can make sure that only the speaker is displayed. It significantly improves video capturing (no need to trigger cameras with a microphone button), and ensures more accurate transcriptions and data reports.

Confidea FLEX

Wireless made easy

reddot design award
winner 2020

The next generation
of **meetings made
easy**. Zero cables,
zero worries.

As meetings become more versatile and increasingly demand greater flexibility, Televic proudly presents the 4th-generation wireless conferencing system: Confidea G4. Thanks to its unparalleled flexibility, everything is possible: from the number of participants to the type of conference room and specific meeting configurations – all delivered with pristine audio quality, and cable-free.

Confidea FLEX G4

Meet the all-in-one wireless conferencing system of tomorrow. It smartly combines an easy set-up and configuration with the world's most advanced features in terms of quality and user-friendliness. The touchscreen offers relevant meeting details, such as the agenda, the identity of the speaker, your position in the queue, polls, and much more. Feel free to personalize the layout by adding your logo.

But Confidea FLEX G4 doesn't just look different. It feels different too. For special interactions (e.g., voting procedures), the display uses haptic feedback. When you cast your vote, the system will gently vibrate, recreating the experience of a physical touch.

Visually impaired users will enjoy the tactile indicators and the 5 additional navigation guides underneath the screen.

Confidea GO G4

Sometimes, you just want to keep things simple. That is why Confidea GO G4 makes it possible to meet up and connect to any remote platform with a discussion-only unit, without the display.

Same look & feel

Confidea GO G4 looks exactly like its award-winning twin, Confidea FLEX G4, but without the display. What is retained? The same jaw-dropping design and the sturdy alloy of zinc and aluminum. No matter how many times you (accidentally) move the microphone, this stable device won't budge an inch.

Want to have the best of both worlds?

Combine the Confidea GO G4 units with Confidea FLEX G4 in one system. The result: a cost-efficient conference set-up, that provides the chairperson with optimal meeting control. For maximum flexibility, you can link the complete wireless solution to a wired conferencing tool.

Confidea features

Ultimate flexibility

Do you have to manage multipurpose meeting rooms, with layouts that change according to the event at hand? Then this system is your perfect partner. Quick and easy to deploy, the Confidea units support both basic and large-scale meeting requirements. Expand them as you wish.

Hear and be heard

Since the microphone units boast integrated loudspeakers, both on-site and remote participants will be able to deliver their message in high-quality audio. Annoying background noise? Not this time.

Smart battery management

Designed for portability, Confidea FLEX G4 will not let battery life get in the way of a productive meeting. Each unit comes with a compact Li-ion battery that will keep the system up and running for 12 hours. If you want to extend that lifetime to a full day, don't hesitate to add a second battery in the additional compartment.

Do you need to replace an empty battery while the system is still operating ('hot swapping')? No problem. Simply add a spare and remove the empty one. No need to reboot. Don't forget to charge the battery: it only takes two hours.

Easy-to-click microphone

Simply push and lock the microphone to get started, and effortlessly remove it from the station by pressing a button. Choose from several microphone options to guarantee crisp quality, regardless of your room set-up. Different microphone lengths, flexible components for a more precise positioning and voice capturing, a low-profile model for a discreet look, ... Everything is possible.

Teams & Zoom integration

Conducting hybrid meetings has never been easier. Zoom, Teams, Webex, ... Whichever conferencing tool you pick, Confidea will allow you to connect to your favorite application and get down to business.

Easy configuration (Confero 360)

If you are particularly fond of your standard laptop, tablet or browser, there is no need to fret. The Confidea system has a built-in web server, so it is easy to configure and manage with your beloved tools.

Secrets are safe

As meetings are meant to be private and confidential, the Confidea FLEX G4 wireless system uses WPA2 Enterprise encryption. What happens in the meeting room, stays in the meeting room.

Worry-free wireless

Based on standard Wi-Fi 5 technology, the system uses a combination of advanced techniques to improve the quality and reliability of the signal reception. That results in a remarkable stability, unique in the wireless conferencing market – truly best in class.

Future-proof investment

One unit, endless possibilities. With its flexible 'one-time purchase' license system, you can keep upgrading Confidea FLEX G4, so you always have the latest features at your disposition. If your meeting needs change (voting options, participant identification, ...), just add the necessary licenses and assign them with a single click.

Confidea solutions & products

Wired solution

CONFIDEA FLEX WIRED

Delegates can become chairpersons with a single movement, and the other way around. The chairperson controls the meeting by starting and pausing the meeting, selecting the next person on the speaker request list, the agenda, the voting sessions and the recordings.

Wireless solution

CONFIDEA FLEX G4

Enjoy unparalleled meeting flexibility with a touch screen conference device that is easily configured through licenses. Activate or deactivate voting, authentication, language channels and more through a simple tap. And switch between chairperson or delegate, on a single device.

+ CONFIDEA GO G4

Looking exactly like its award-winning twin, Confidea FLEX G4 but without the display, Confidea GO makes it possible to meet up and connect to any remote platform with a discussion-only unit.

BATTERY PACK

Confidea BP G4, a high-capacity Li-ion rechargeable battery pack with an autonomy of 12h.

CHARGING TRAY

The Confidea CHT G4 charging tray is a compact rack-mountable device, able to charge up to 10 batteries.

WIRELESS ACCESS POINT

The compact yet powerful Confidea FLEX G4 access point is the heart of the wireless conference system. It ensures a reliable, secure, and robust communication between all units. The built-in web-based software streamlines the installation, while additional licenses can unlock any meeting management tools you could wish for (polls, reporting features, etc.).

TRANSPORT CASE

With the Confidea FLEX TC transport case, you can easily transport a complete meeting set-up from one room or venue to another – anywhere, anytime. There is room for up to 16 FLEX units (including batteries), 16 microphones, an access point, an adapter, and a couple of cables.

uniCOS

Efficient multimedia meetings with multiple screens

Create efficient,
**collaborative
multimedia meetings**
that truly bring your
participants together.

uniCOS is a state-of-the-art multimedia conference unit that provides everything you need for meetings that require multiple individual screens. Top-notch audio quality, up to 6 lip-sync video streams, document-sharing features and user-friendly hybrid meeting applications – all ready for you to explore on the touchscreen. Thanks to one single CAT 5e cable, the installation is a breeze.

uniCOS features

Teams & Zoom integration

Focus on the message, not the technology. With uniCOS, you can bring your on-site and remote attendees together by means of your preferred cloud-based meeting platform. From Zoom to Teams and Webex (and many more): all participants will be harmoniously connected in an optimal audiovisual setting. Ready to conduct the smoothest hybrid meetings ever?

Hear and be heard

Each conference device in the uniCOS system has an individual gooseneck microphone with a directional polar pattern. Those cardioid pickup microphones do more than detecting audio. Since they are most sensitive to sounds immediately in front of them, any side noises are deftly shut out. Both live and remote participants will be able to understand and deliver messages. The built-in loudspeaker carries their voices around the room, distributing them equally – and highly intelligibly – across all conference devices.

All-in-one solution

The wow factor of this tool goes beyond its award-winning design. Provide every attendee with their own video monitor, simplify screen sharing, and refer camera location or automation issues to the past. Seamlessly manage audio and video challenges, and make your meetings increasingly efficient along the way.

reddot design award
winner 2020

Award-winning design

uniCOS allows a clear view of both the speakers and all the content you share. The small individual screens easily overcome line-of-sight issues, even in the narrowest board rooms or the most inconvenient seating arrangements. There is no need to invest in bigger screens or mount cameras, that will inevitably make your meeting space look like a sports bar or a TV studio.

This award-winning design is the result of a careful product development process that fully focused on our customers' needs. From the adjustable camera to the tiltable screen and the non-intrusive design: they all contribute to an unparalleled user experience.

Decision-making
made smarter,
faster & precise

uniCOS solutions & products

TABLETOP UNIT

Meet our flagship multimedia conference solution: uniCOS T/MM10. Specifically designed for the Plexus architecture, it can be configured for either chairpersons or delegates. Features include HQ audio, up to 6 lip-sync video streams, document-sharing features, and more. With the tiltable 10" touchscreen, all audiovisual information is literally at the participants' fingertips.

But it gets even better. UniCOS T/MM10 is delightfully easy to install with a single CAT 5e cable and powered by the Plexus network. If you need it for a specific project, feel free to customize the solution with flush-mount units.

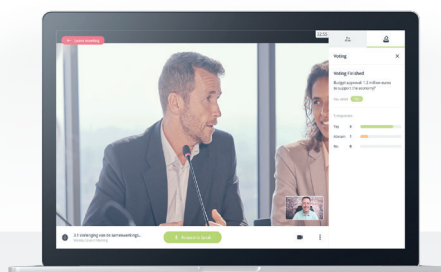

INTERPRETER DESK

Take your multilingual meeting management to the next level with the interpreter desk – designed for and by interpreters.

AUTOMATIC CAMERA CONTROL

Discover Confero CAM for automatic conference camera tracking.

CONFERO

Streamline meeting control with this all-in-one, convenient and web-based meeting management solution.

D-CERNO

Digital discussion system for conference rooms

A wired digital discussion-only system **for small and medium-sized conference rooms.**

D-Cerno is a wired digital discussion system intended for **small or medium-sized conference rooms**. The set-up is designed to work out-of-the-box: simply connect all units to the central engine. Whether you go for a tabletop option or a flush-mount unit: get ready to enjoy D-Cerno's state-of-the-art digital technology, **elegant design**, and **user-friendliness**.

D-CERNO features

Versatile

Apart from the tabletop solution, the D-Cerno system also offers a flush-mount option: D-Cerno FM. The digital microphone flush-mount panel is housed in an elegant case with a sleek design, so you can integrate it discreetly into all kinds of meeting room set-ups.

Digital and shielded

D-Cerno offers a fully digital system with perfect sound and a shielded microphone. Time to say goodbye to mobile-phone interference.

Plug & Play

Because of D-Cerno's patent-protected redundancy, you just need to connect all units in daisy chain to the central engine. No initialization required.

Integrated solution / Teams & Zoom integration

Hybrid is here to stay, D-Cerno is here to help. Supported by an open API, D-Cerno enables you to join your on-site and remote attendees through the cloud-based meeting platform of your choice. Zoom, Teams, Webex, and more: keeping participants on topic has never been easier.

You can also connect D-Cerno to a dedicated Televic or third-party camera tracking system, so all stakeholders can clearly see and understand each other in close-up.

D-CERNO solutions & products

D-CERNO SL

With its sleek and compact form factor, D-Cerno SL guarantees zero mobile-phone interference and a great digital sound quality. It is equipped with tactile buttons, braille indicators, headphone connections and volume control.

The chairperson units have extra functionalities, such as Next-in-line and Priority buttons. The microphone is removable (different lengths are available – just order them separately) and the cable connections are concealed for a neat overall look and feel.

D-CERNO CUR

With D-Cerno CUR, you can make your central unit blend in and perform perfectly, by connecting up to 50 D-Cerno units. The central unit includes an integrated web server, which facilitates remote control through your tablet or smartphone. It is also possible to integrate a camera-tracking system. And thanks to the 2 USB connectors on the front, you can record meetings quickly and easily.

D-CERNO PS

The D-Cerno PS is a 48 VDC/180 W spare power supply, with a built-in indicator light on the front.

FLUSH-MOUNT UNITS

Smooth and discreet, D-Cerno F-DM is a digital microphone flush-mount panel intended for basic discussion systems. It offers a crystal clear sound and excellent intelligibility. Thanks to its small form factor and elegant casing, you can easily blend it in with your meeting room furniture. The panel also has an on/off tactile microphone push button and an integrated LED light to indicate the mic status.

The chairperson unit, D-Cerno F-CM, boasts additional functionalities, such as Next-in-line and Priority buttons. A screw-lock connector allows you to pair it with a removable microphone (different lengths are available – just order them separately)..

STORAGE CASE

D-Cerno SL TC is a high-quality storage case for a complete D-Cerno SL system. You can store 12 units, a central unit, a power supply, 12 microphones of various lengths (30, 40 or 50 cm) and all cables. The foam inlays have been laser-cut, creating a perfect fit for every piece of equipment, and offering maximum protection against dust and impact.

Confero CAM

Your hands-free camera director

Confero CAM, your hands-free camera director, adds out-of-the-box camera control to your meeting room. As a result, you do not need a production team to deliver a **professional and engaging video output for participants** of a hybrid meeting or viewers of a live stream. Confero CAM enables **effortless meeting capture, streaming** and **increased engagement** for your hybrid meetings.

Streaming

Transparency toward constituents and use of video for political marketing purposes is of growing importance. Confero CAM **provides professional looking video towards your streaming platform** of choice. In the future streaming control will automatically be handled in the Confero interface.

Hybrid meetings

Use our high quality audio from our discussion systems and video from Confero CAM for your managed meetings within Confero MEET and your daily hybrid meetings within Teams, Zoom and others.

televic
Confero MEET

Ultimate flexibility

- + Support multiple meeting room setups
- + Handle larger rooms with support for up to 8 cameras
- + Two camera shots for each seat
- + Wide range of supported IP cameras
- + Modular solution that easily grows with your needs
- + Smart managed privacy position of the cameras when no meeting or discussion is ongoing

Powerful now, scalable towards the future

We've built Confero as a powerful and scalable conference meeting platform. With a Plixus gateway available in the room, adding extra capabilities is as easy as adding licenses. No additional hardware investment is required so you leverage your initial investment.

The Confero platform currently exists of the following capabilities :

- + **Confero PLAN**
meeting preparation and agenda management
- + **Confero CAM**
hands-free camera director
- + **Confero MEET**
Hybrid meeting with moderation capabilities

Addition of Confero PLAN and / or MEET will also provide additional functionality to Confero CAM.

Confero CAM + PLAN

The video output will be enriched with an overlay of information like name of the speaker, discussed agenda topic and voting results. This happens automatically following the flow of the meeting so no need to switch information, one thing less to worry about.

Confero CAM + PLAN + MEET

Adding Confero MEET in the mix adds the capability to extend the meeting room with remote participants resulting in hybrid meeting capabilities with the same moderation and meeting control capabilities as the in-room solution.

Simplified installation and design choices

One device, lots of firepower

The Plixus gateway combines camera control, video switcher and streaming device in a single box. Moreover it's readily available as no PC is required to get the solution operational. As configuration is web-based no installation is required and the software is always kept up to date.

Efficient & cost effective

The speed for the installation can be reduced drastically. Instead of waiting for the equipment to be shipped, configuration of the room layout with seats and cameras can be prepared upfront in our Confero platform. A single person can configure ideal camera shots for each position by moving from seat to seat and seeing the result right in front of him in the user interface. Being an out-of-the-box solution no scarce control programming resources are needed to build a bespoke.

Optimize cabling

From an installation point of view a single CAT5 cable provides power, control and video signals. Less cabling requirements provide more flexibility in mounting the cameras at the optimal spot in the room resulting in better camera shots of the participants.

Choose your camera brand

Besides the Lumens and Avonic cameras Televic offers, an extended list of widely used cameras is supported and will grow over time.
