

# TILED™

*with style*

Chief's new TILED™ Series is a modular, LED mounting system designed to support creative video wall configurations. The system can include any of three mounts supporting 1, 2 or 3 LED displays that connect together to form a seamless video wall.

Integrated plumb adjustment helps to compensate for imperfections in the wall, keeping everything flat. Offset mounting slots allow for easy installation and protect LEDs from the damaging friction that can occur when display edges rub together.

The initial TILED offering is designed to support the Samsung® IFH Series.
