

elipson® | Chroma Stabilizer

ACCESSORY FOR TURNTABLE

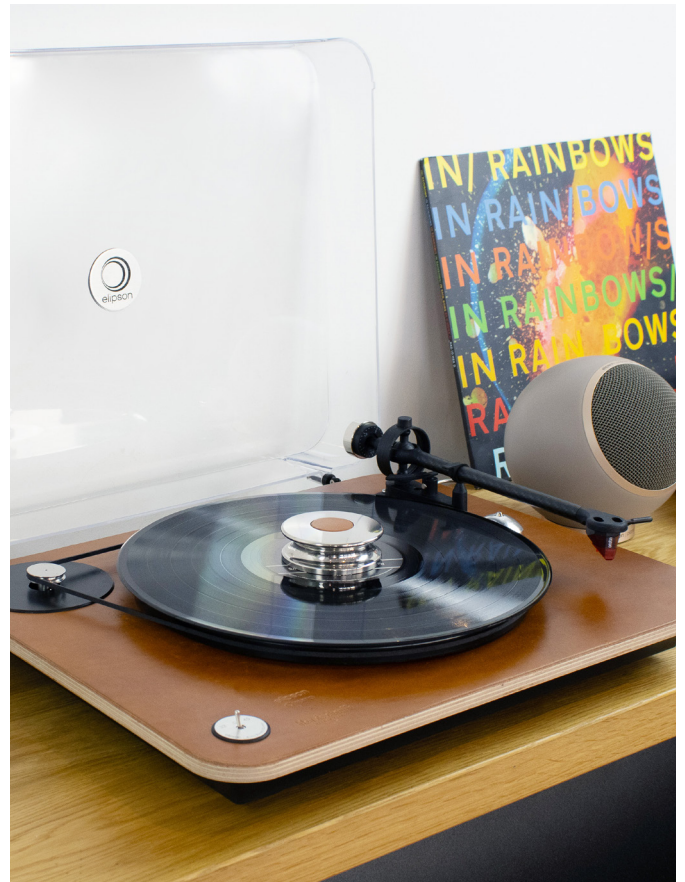

The Elipson stabilizer eliminates the vibrations of the vinyl on the plate.

Available in two finishes, black leather or aged natural leather, it guarantees a better sound quality and a more refined listening of your vinyl record.

Thanks to its weight of 0.5 kg, the Elipson stabilizer avoids vibrations when playing vinyl records.

It is positioned in the centre of your plate and thus improves the contact between the record and the plate of your turntable.

In addition to reducing vibrations, the Elipson stabilizer also limits the deformation of your vinyl records, and when they are already deformed to reduce the impact during playback.
