- 1 Measurement, measuring conditions, and method of notation all comply with ISO/IEC 21118: 2020 international standards. Value is average of all products when shipped.
- 2 Around this time, light output will have decreased by approximately 50 %. IEC62087: 2008 Broadcast contents, [Dynamic Contrast]: [3] , under conditions with 30 °C (86 °F), 700 m (2,297 ft) above sea level, and 0.15 mg/m<sup>3</sup> of particulate matter. Panasonic recommends cleaning or checkup at point of purchase after about 20,000 hours. Light-source lifetime may be reduced depending on environmental conditions.  
Replacement of parts other than the light source may be required in a shorter period. Estimated maintenance time varies depending on environment.
- 3 4K/60p and 4K/50p input signals are converted to projector's resolution (1920 x 1200), YPbPr 4:2:0 format only for signals input via DIGITAL LINK.
- 4 Depending on the connected CEC-compatible device, the link control may not operate normally.
- 5 Average value. May differ depending on models.
- 6 Note that projector cannot be used at altitudes 2,700 m (8,858 ft) or higher above sea level. In the following operating environments, light output may be reduced to protect the projector; when the projector is used at altitudes below 1,400 m (4,593 ft) and ambient temperature is 35 °C (95 °F) or higher; when the projector is used at altitudes between 1,400 m (4,593 ft) and 2,700 m (8,858 ft) exclusive and ambient temperature is 30 °C (86 °F) or higher.  
The operating environment temperature should be between 0 °C (32 °F) and 40 °C (104 °F) when the optional Wireless Module (Model No.: AJ-WM50 Series) is attached.
- 7 When the projector is mounted to the existing Ceiling Mount Bracket (in combination with the Model No.: ET-PKD120H (for High Ceilings) or - ET-PKD120S (for Low Ceilings), and the Model No.: ET-PKE300B (Projector Mount Bracket)), it is necessary to replace the drop-prevention - wire rope with the one corresponding to this projector. Consult your dealer.  
Drop-prevention set (service model no.: DPPW1004ZA/X1)
- 8 The suffix of the Model No. differs according to the license type.
- 9 This is the value when the Zoom Lens (Model No.: ET-EMS650) is used. The value varies depending on the lens.
- 10 Under the dust conditions of 0.15 mg/m<sup>3</sup>.  
Filter cleaning cycle varies depending on environment. Filter can be washed and reused up to two times.
- 11 Optional wireless module AJ-WM50 does not support IPv6.

1 The throw ratio is based on the value during projection with the projected image size of 2.54 m [100 in].

2 ET-EMT800 cannot be used in 600 inches.

- The value for L (distance to screen) varies slightly within  $\pm 5\%$  depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

1 The throw ratio is based on the value during projection with the projected image size of 2.54 m [100 in].

2 ET-EMT800 cannot be used in 600 inches.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

1 The throw ratio is based on the value during projection with the projected image size of 2.54 m [100 in].

2 ET-EMT800 cannot be used in 600 inches.

- The value for L (distance to screen) varies slightly within ±5% depending on the zoom lens characteristics.
- The zoom lens characteristics may cause slight image distortion.
- When vertical keystone correction is used, the image is corrected in the direction that reduces its projected size.
- The brightness varies depending on the zoom setting.

### Formula to calculate projection distance per Projection Lens

To use a screen size not listed in this manual, check the screen size SD (m) and use the respective formula to calculate projection distance.

The unit of all the formulae is m. (Values obtained by the following calculation formulae contain a slight error.) When calculating a projection distance using image size designation (value in inches), multiply the value in inches by 0.0254 and substitute it into SD in the formula for calculating the projection distance.

**Lens shift range**

The projector can adjust the position of the projected image within the lens shift range for each projection lens based on the position of the projected image in the home position (standard projection position). Perform the lens shift adjustment within the range indicated in the following illustration. Note that moving the lens outside the adjustment range may change the focus. This is because the shift of the lens is restricted to protect the optical parts.

Following illustration indicates the lens shift range when the projector is installed on desk/floor.

<sup>1</sup> When [VERTICAL KEYSTONE] and [HORIZONTAL KEYSTONE] are used simultaneously, correction cannot be made exceeding total of 55°.

**Note**

- When [GEOMETRY] is used, the focus of the entire screen may be lost as correction increases.
- Make the curved screen a circular arc shape with one part of a perfect circle removed.
- Adjustment range of the [GEOMETRY] items may not match the listed projection range depending on the projection lens. Use this projector within the projection range, otherwise the correction may not work.

**Installable angle**

Install the projector at an angle within the range shown below.

**FULL 360-degree projection**

Vertical 360-deg.

Horizontal 360-deg.

Tilting 360-deg.  
(V&H combination)

**Notes on projector placement and operation**

- Use the adjustable feet only for the floor standing installation and for adjusting the angle. Using them for other purposes may damage the projector.
- When using the projector in any method other than the floor installation using the adjustable feet or ceiling mounting installation using the Ceiling Mount Bracket, use the four screw holes for ceiling mount (as shown in the figure) to fix the projector. In such case, make sure that there is no clearance between the screw holes for ceiling mount on the projector bottom and the setting surface by inserting spacers (metallic) between them.
- Use a torque screwdriver or Allen torque wrench to tighten the fixing screws to their specified tightening torques. Do not use electric screwdrivers or impact screwdrivers. For the screws to fix the projector, use commercially available ISO 898-1 standard screws (made of carbon steel or alloy steel). (Screw diameter: M6, tapping depth inside the projector: 12 mm [15/32 in], torque: 4 ± 0.5 N·m)

Positions of screw holes for ceiling mount and adjustable feet

- Do not stack projectors on top of each other.

- Do not block the intake/exhaust vents of the projector.

- Prevent hot and cool air from the air conditioning system or exhaust of other projectors from blowing directly to the intake/exhaust vents of the projector.

- Do not install the projector in a confined space. When installing the projector in a confined space, provide air conditioning or ventilation separately. Exhaust heat may accumulate when the ventilation is not enough, triggering the protection circuit of the projector.

- When installing and fixing the projector on a ceiling or wall using a mount, make sure that the fixing screw or power cord does not come in contact with the metal section inside the ceiling or wall. Failure to observe this may result in electric shocks.
- Panasonic Connect Co., Ltd. takes no responsibility for any damage to the product caused by an inappropriate choice of location for installing the projector, even if the warranty period of the product has not expired.
- Immediately remove the product that is not in use anymore by asking a qualified technician.

### Note

- A signal with a different resolution is converted to the number of display dots. The number of display dots is 1920 x 1200.
- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
- When the DIGITAL LINK connection is made with the long-reach communication method, the signal that the projector can receive is up to 1080/60p (1920 x 1080 dots, dot clock frequency 148.5 MHz).
- Even if it is the signal listed in the list of compatible signals, it may not be displayed by the projector if the image signal is recorded in a special format.

## List of plug and play compatible signals

- The following table specifies the image signals compatible with plug and play. Signal with ✓ in the plug and play compatible signal column is the signal described in the EDID (extended display identification data) of the projector. For the signal without ✓ in the plug and play compatible signal column, the resolution may not be selected on the computer even if the projector is supporting it.
- Input corresponding to each item in the plug and play signal column is as follows.

<sup>1</sup> The signal with 1/1.001x vertical scanning frequency is also supported.

### Note

- The "i" at the end of the resolution indicates an interlaced signal.
- When interlaced signals are connected, flickering may occur on the projected image.
