CoCon Import/Export

Description

CoCon is a software suite for conference management & assistance, that opens up a host of options and configuration setting to control every aspect of the meeting experience. CoCon is connected to a central conference unit that controls a number of microphones and other conference equipment. The software interacts with the central conference unit to enable various functionalities and views on the conference. That is why CoCon is conceived as a client-server framework. The CoCon Discussion Module serves as the base of the suite and is needed to run other plugin modules.

CoCon Import/Export [Client-side]

CoCon Import/Export is a module which allows a transparent and easy interaction with third-party software, e.g. legal meeting software, room booking systems, webcasting solutions. A meeting can be completely prepared according to a specific XML structure. This XML file can be loaded into the meeting manager or it can be used directly to start a meeting. After the meeting, the meeting results and statistics can be exported into a similar XML structured file so the third-party software can retrieve all relevant meeting data.

The same process is available with Word™-files. There, the meeting has to be prepared in Word with specific styles and headers to maintain the

structure. The meeting manager can read the file to create the meeting. After the meeting the user can select the relevant data fields to automatically create a Word-file with the required meeting results.

Features

- Easy import/export of settings
- Fast agenda creation,
- Reusable templates

System Requirements

Hardware Requirements

Room Server

- Processor: Intel i5 2 GHz or higher.
- RAM: minimum 4 GB
- Free disk space: minimum 10 GB
- Network connectivity: at least 100 MB/s

Client Applications

- Processor: Intel® Dual-Core 2 GHz or higher
- RAM: Minimum 4 GB.
- Recommended GPU: supporting DirectX 9.0 or better
- Free disk space: Minimum 10 GB
- Network connectivity: at least 100 MB/s

Network requirements for Central Units connecting over TCP/IP:

- Available bandwidth of at least 100 Mb/s for each CoCon Room server/Central Unit connection

Software Requirements:

- Windows 7
- Windows 8
- Windows 10

Each PC installed with a CoCon component (any server or client application) requires the .Net Framework 4.5. This will be installed automatically when CoCon is being installed.
